Novita Aurora Construction Progress

Our team is growing! Earlier this month, we conducted interviews to staff the Novita Aurora plant facility. We're excited about the quality of skilled candidates that applied, and that we successfully fulfilled 2/3 of the team that is required to operate the plant. Construction is progressing with almost 300 skilled workers on-site per day and we're on track for NovaMeal & NovaOil to be delivered in Q4 2016.

Dust control cyclones are being installed to capture particulate matter from being released to the atmosphere.

The scale is finished (pictured on the right), it will weigh in-bound and out-bound products from Novita Aurora.

The railroad track ballast is being placed and packed down between, below and around the railroad ties.

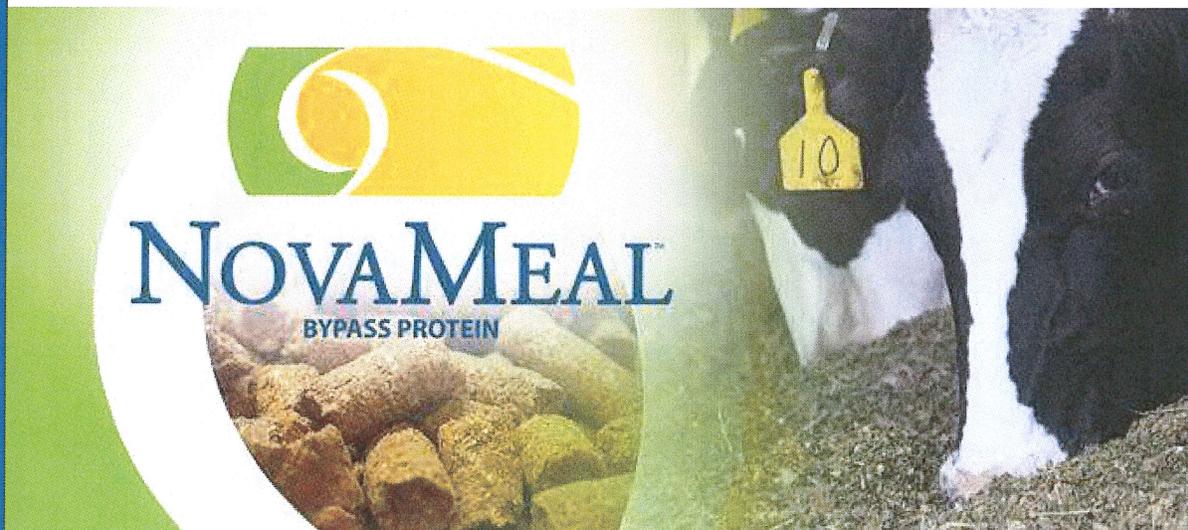

Cooling water pipes provide necessary heat adsorption and dissipation from the production process.

Wire, wire and more wire. The crew has been busy pulling almost 20 miles worth of wires across the facility.

The administration building is taking shape.

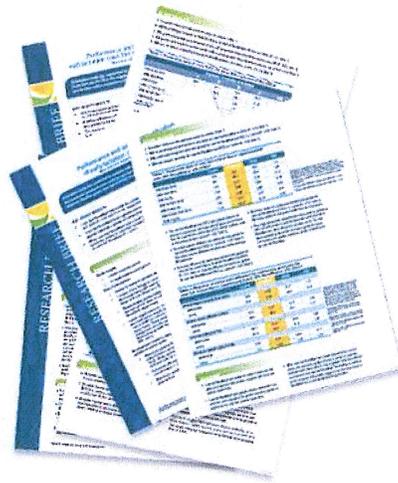

NovaMeal: Proven by Research

NovaMeal provides many nutritional components all in one package providing a better value from feedstuff, ultimately, saving the dairy money.
